

C&K's new RT Series Tactile Pushbutton Switches feature a silicone rubber dome with an extended mechanical travel that is five times greater than the traditional metal dome tactile switches. Constructed of high temperature thermoplastic materials, these miniature tactiles are process compatible and capable of withstanding infra-red soldering processes. The RT Series is available in thru-hole and surface mount packages with an actuation force of 120 or 300 grams.

#### **Features**

The ideal switch for a variety of applications!

- Low cost
- Long mechanical travel
- High temperature plastics
- Tape and reel packaging

## **Applications**

- Computers and peripherals
- Telecommunications equipment
- Cell and cordless phones
- 2-way radios

If your design requires a high quality, low cost tactile switch, delivered within your time frame, C&K has the solution. For additional information, free samples and our latest catalog, call today. Or make your request online at <a href="https://www.ckcorp.com">www.ckcorp.com</a>.

### **SPECIFICATIONS**

CONTACT RATING: 5mA max. @ 12 V DC. 50µA min. @ 2 V DC.

ELECTRICAL & MECHANICAL LIFE: 50,000 cyles.

CONTACT RESISTANCE:  $1K\Omega$  max. initial.

INSULATION RESISTANCE:  $100M\Omega$  min.

DIELECTRIC STRENGTH: 250 V AC.

OPERATING TEMPERATURE: -30°C to 80°C.

PACKAGING: Surface mount models, tape & reel,

1,000 switches per reel.

Thru-hole models, bulk packaging.

## **MATERIALS**

BASE: LCP.

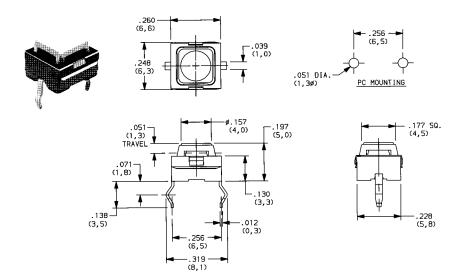

COVER: Stainless steel.

ACTUATOR: LCP.

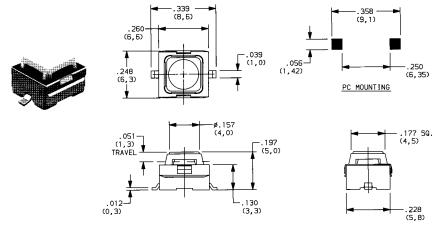

DOME: Silicone rubber.

TERMINALS: Brass.
