

# Airborne<sup>™</sup> Embedded Wireless Device Server Serial to 802.11b Wireless LAN (Module)

WLNB-AN-DP100 series WLNB-AN-DP500 Enterprise series WLNB-SE-DP100 series

## Interoperable with advanced security

Airborne<sup>™</sup> is a line of highly integrated 802.11 modules. The wireless module includes a radio, a base-band processor, an application processor and software for a "drop-in" web-enabled WiFi solution. Since there's no need to develop the software, or to develop the RF and communications expertise in-house, OEM's can realize reduced product development costs and a quick time-tomarket. Airborne<sup>™</sup> modules provide instant LAN and Internet connectivity, and connect through standard serial interfaces to a wide variety of applications.

### **Applications**

The extremely small footprint design makes Airborne<sup>™</sup> easy to embed into new or existing designs. The module is interoperable with industry standard 802.11 access points and advanced security standards such as WEP, WPA and EAP, that provide a low cost infrastructure for connection to a LAN and to the Internet. The built-in TCP/IP stack application software provide and embedded devices with instant LAN and Internet connectivity without special

programming of the module - only simple configuration is required using DPAC's HTML interface. An integrated web server makes it easy to remotely monitor and control any device using a standard browser. Additionally, the OEM can create custom web pages that deliver content from their application.

The Airborne<sup>™</sup> modules have been designed to provide wireless LAN and Internet connectivity in these industries:

- transportation •
- medical .
- warehouse logistics
- POS •
- industrial
- military .
- scientific .

Equipment with an embedded Airborne<sup>™</sup> module can be monitored and controlled by a handheld device, by a PC in a central location or over the Internet.

The Evaluation & Design Kit provides software and utilities that allow a developer to quickly and easily operate and evaluate the Wireless Device Server module.

#### **Model Selection Guide**

	Interface					WiFi	Security		
Model No.	UART	RS-232	RS-422/485	SPI	Digital & Analog I/O	802.11b	WEP (64 & 128 bit)	WPA	LEAP*
WLNB-AN-DP101	•	•			•	•	•	٠	
WLNB-AN-DP102				٠	•	•	•	٠	
WLNB-AN-DP501	•	•			•	•	•	•	•
WLNB-AN-DP502				٠	•	•	•	٠	•
WLNB-SE-DP101	•	•	•			•	•	٠	
WLNB-SE-DP501	•	•	•			•	•	٠	•

For RoHS-compliant 802.11b products, add "-G" at end of model number.

\* Web server not present with LEAP

- Built-in web server enables drop-in LAN and Internet connectivity

**KEY FEATURES** 

Extended operating temperature range (-40°C)

including shock and vibration tolerance

and 802.1x (LEAP) authentication

Low power modes

to +85°C) and environmental specifications,

Advanced security: WEP (64 & 128 bit), WPA

- Highly integrated 802.11b wireless module with radio, base-band & application processor
- Quick time to market & reduced development costs
- Configurable serial, digital & analog I/O ports
- Integrated RTOS, TCP/IP Stack and CLI
- FCC Part 15 Class B Sub C Modular Approval
- Reduces need for RF and communications expertise
- RoHS compliant
- 5 year warranty
