

E-Z-MACRO-HOOK, INSULATION-PIERCING: XEL

XEL

Actual Size

Part Number	Description
XEL-(color)	Insulation-Piercing Macro Hook

Standard Model Construction:

The hypo-action plunger and tip housing are molded in durable nylon. Contact point is a single piece of stainless steel with insulated shaft and tip, permitting connection for .050" to .150" diameter wire. A single stainless steel compression spring controls the piercing action.

Colors: Available in 10 standard colors. See inside back cover for details.

E-Z-Hook lead options: See pages 54-55. Part is also available with factory installed leads, see following page.

Features:

- Nylon exterior is impervious to most cleaning solvents and fuels
- Fully insulated shaft and tip prevents shorts
- Spring loaded design is easy to use and v-shaped tip separates wire bundles for ease of connection to individual wires
- Insulated banana socket in T-shape handle allows for quick lead change and multiple interface capabilities
- Accepts standard and shrouded banana plugs

The insulation-piercing hook is designed for hard to make test connections of varying wire sizes. The pointed tip allows separation of dense wire groups and easy connection.
