# 2.5V / 3.3V 1:10 Differential ECL/PECL/HSTL Clock Driver

The MC100LVEP111 is a low skew 1–to–10 differential driver, designed with clock distribution in mind, accepting two clock sources into an input multiplexer. The PECL input signals can be either differential or single–ended (if the  $V_{BB}$  output is used). HSTL inputs can be used when the LVEP111 is operating under PECL conditions.

The LVEP111 specifically guarantees low output-to-output skew. Optimal design, layout, and processing minimize skew within a device and from device to device.

To ensure tightest skew, both sides of differential outputs identically terminate into 50  $\Omega$  even if only one output is being used. If an output pair is unused, both outputs may be left open (unterminated) without affecting skew.

The MC100LVEP111, as with most other ECL devices, can be operated from a positive  $V_{CC}$  supply in PECL mode. This allows the LVEP111 to be used for high performance clock distribution in +3.3 V or +2.5 V systems. Single–ended CLK input operation is limited to a  $V_{CC} \! \geq \! 3.0$  V in PECL mode, or  $V_{EE} \! \leq \! -3.0$  V in NECL mode. Designers can take advantage of the LVEP111's performance to distribute low skew clocks across the backplane or the board. In a PECL environment, series or Thevenin line terminations are typically used as they require no additional power supplies. For more information on using PECL, designers should refer to Application Note AN1406/D.

- 85 ps Typical Device-to-Device Skew
- 20 ps Typical Output-to-Output Skew
- Jitter Less than 1 ps RMS
- Maximum Frequency > 3 Ghz Typical
- V<sub>BB</sub> Output
- 430 ps Typical Propagation Delay
- The 100 Series Contains Temperature Compensation
- PECL and HSTL Mode Operating Range:  $V_{CC} = 2.375 \text{ V}$  to 3.8 V with  $V_{EE} = 0 \text{ V}$
- NECL Mode Operating Range: V<sub>CC</sub> = 0 V with V<sub>EE</sub> = -2.375 V to -3.8 V
- Open Input Default State
- LVDS Input Compatible
- Fully Compatible with Motorola MC100EP111
- Pb-Free Packages are Available\*

Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If stress limits are exceeded device functional operation is not implied, damage may occur and reliability may be affected. Functional operation should be restricted to the Recommended Operating Conditions.
