Single Output Programmable DC Power Supplies

Models 9120A, 9121A, 9124

B+K Precision® models 9120A, 9121A and 9124 are laboratory grade Programmable DC Power Supplies providing great performance and features not found in other supplies in this price category. The 9120 series are designed to meet the needs of today's applications in R&D design verification, production testing or university labs that require clean and reliable power, high resolution and accuracy and fast transient response time.

- **Excellent display resolution**
- **Low ripple and low noise**
- **Outstanding temperature stability**
- **Fast transient response time (<20ms)**
- **SCPI compatible**
- **Front and Rear Output Terminals**
- **Closed case calibration**
- **Compact size for bench use or rack mountable (2U x 1/2U size)**
- **List mode operation for increased throughput. Download and execute command sequences from non-volatile memory**

9120A

Front Panel Operation

The numeric keys and rotary knob provide a convenient interface for setting output levels quickly and precisely. Voltage and Current can be set to a maximum resolution of 0.5mV (2mV for 9124) and 0.1mA respectively. Up to 50 parameters can be stored and recalled from internal memory.

High resolution display

Encoder knob for quick analog style control

Numeric keys for direct entry of voltage and current values

Output ON/OFF switch

4mm sheathed safety banana jacks

Remote Interface

The power supplies can be remotely controlled from any PC with USB or RS232 interface, allowing the user to program and monitor all parameters through easy to use SCPI commands. The power supplies come with a RS232 communication cable. A USB communication cable is available as option.

Extra Features

The 9120 series' digital port offers a variety of configurations. The port can operate in Digital I/O, external Trigger and DFI/RI (Discrete Fault Indicator/Remote Inhibit) mode. The RI feature can be used for turning several power supplies On/Off simultaneously. External triggering can be used in combination with List mode.

The included Application Software supports front panel emulation and allows users to generate simple test sequences without the need to write source code.

Additionally, the power supply comes with a built-in 5 1/2 digit DVM and high resolution milliohm meter supporting 4 wire measurements.

Temperature controlled cooling fan

DVM and mΩ meter

User accessible fuse

Remote Sense and digital port functionality

Serial interface connector for RS232 or USB communication. (USB communication cable is optional)
