

Supplementary Circuit Protector ATR20

The ATR20 circuit protector is a single pole, thermally operated, snap-action overload protector, with a manual, push-to-reset mechanism providing reliable 'trip-free' operation on overloads and short-circuits within the maximum capacity specified. A high contact force is maintained until the contacts break due to overload through the snap-action bimetal disc.

OPERATION:

The entire mechanism of the circuit protector is based on the use of a snap-action cantilevered, thermo-bimetal disc profile with silver alloy contacts, designed to open in the event of a current flow in excess of the rated current, according to the time/current characteristics of the device. The contacts open and close with a positive snap action and the tripped state is clearly indicated by the extended projection of the reset button.

TIME & CURRENT CHARACTERISTICS:

The standard characteristic is valid for ambient temperature of 25°C. If the device is to be used in an ambient temperature other than 25°C, allowance must be made when selecting the current rating according to the following guidelines:

Ambient temp. (°C)	-20°C	-10°C	0°C	10°C	25°C	30°C	35°C
MULTIPLIER							
2.5A	0.58	0.6	0.7	0.8	1	1	
3A to 4A	0.8	0.85	0.9	0.9	1	1	1.1

Ambient temp. (°C)	-20°C	-10°C	0°C	10°C	25°C	40°C	50°C	60°C
MULTIPLIER								
5A to 20A	0.8	0.85	0.88	0.9	1	1.1	1.3	1.4

Example:

Normal continuous current 5.0A
Ambient temperature 40°C
Multiplication factor 1.1
Selected rated current at 40°C ambient temperature 5.0 x 1.1 = 5.5
Select 6.0A (nearest)
