

# 300mA CMOS Dual LDO Regulator

#### **FEATURES**

- Two outputs with guaranteed 300mA peak output current
- Low dropout voltages of 210mV typical at 300mA
- Stable with ceramic output capacitors
- Independent enable pins
- Under voltage lockout
- No-load ground current of 100µA typical
- Full-load ground current of 160µA typical
- ±1.0% output voltage initial accuracy
- ±2.0% accuracy over temperature
- "Zero" current shutdown mode
- Fold-back current limit and thermal protection
- TSOT-23 6-lead, 0.8mm height package

### **APPLICATIONS**

- Cellular phones
- **Battery-powered devices**
- Consumer Electronics

#### DESCRIPTION

The 300mA CMOS Dual LDO CAT6221 combines in a single TSOT-23 6-lead package two low dropout regulators (LDO), each with its own enable pin.

The regulator outputs drive loads up to 300mA. By design, the dual LDO provides fast response time during load current and line voltage changes.

Each LDO is optimized for low noise and high crosstalk isolation. With zero shut down current and a low guiescent current of 100µA, the dual LDO is ideal for battery-operated devices with supply voltage from 2.3V to 5.5V.

The dual LDO offers 1% initial accuracy and very low dropout voltage, typical 210mV at 300mA. Stable operation is provided with small 1µF ceramic output capacitors, reducing required board space and component cost.

Other features include fold-back current limit and thermal protection.

The dual LDO is available in the tiny 6-lead TSOT-23 package with a maximum height of 0.8mm.

For Ordering Information details, see page 10.

#### PIN CONFIGURATION

#### 6-Lead TSOT-23 (0.8mm height)

### TYPICAL APPLICATION CIRCUIT

### PIN DESCRIPTIONS

| Pin# | Name  | Function                              |  |  |
|------|-------|---------------------------------------|--|--|
| 1    | EN1   | Enable input (active high) for VOUT1. |  |  |
| 2    | VIN   | Supply voltage input.                 |  |  |
| 3    | EN2   | Enable input (active high) for VOUT2. |  |  |
| 4    | VOUT2 | LDO Output Voltage 2.                 |  |  |
| 5    | GND   | Ground reference.                     |  |  |
| 6    | VOUT1 | LDO Output Voltage 1.                 |  |  |

#### PIN FUNCTION

**VIN** is the supply pin for the LDO. A small 1 $\mu$ F ceramic bypass capacitor is required between the V<sub>IN</sub> pin and ground near the device. When using longer connections to the power supply, C<sub>IN</sub> value can be increased without limit. The operating input voltage range is from 2.3V to 5.5V.

**EN1 & 2** are the enable control logic (active high) for the regulator outputs.

**VOUT1 & 2** are the LDO regulator outputs. A small  $1\mu F$  ceramic bypass capacitor is required between the VOUT pins and ground. For better transient response, its value can be increased to  $4.7\mu F$ .

The capacitor should be located near the device. For the TSOT23 6-lead package, a continuous 300mA output current for both LDOs may turn-on the thermal protection.

### **BLOCK DIAGRAM**

Figure 2. CAT6221 Functional Block Diagram

On each output, a  $250\Omega$  internal shutdown switch discharges the output capacitor in the no-load condition.

**GND** is the ground reference for the LDO. The pin must be connected to the ground plane on the PCB.

### ABSOLUTE MAXIMUM RATINGS(1)

| Parameter                                 | Rating                       | Unit |
|---|------------------------------|------|
| $V_{IN}$                                  | 0 to 6.5                     | V    |
| $V_{EN}$ , $V_{OUT}$                      | -0.3 to V <sub>IN</sub> +0.3 | V    |
| Junction Temperature, T <sub>J</sub>      | +150                         | °C   |
| Power Dissipation, P <sub>D</sub>         | Internally Limited (2)       | mW   |
| Storage Temperature Range, T <sub>S</sub> | -65 to +150                  | °C   |
| Lead Temperature (soldering, 5 sec.)      | 260                          | °C   |
| ESD Rating (Human Body Model)             | 3                            | kV   |

### **RECOMMENDED OPERATING CONDITIONS** (3)

| Parameter  | Range                | Unit |
|--|----------------------|------|
| V <sub>IN</sub>                                    | 2.3 to 5.5           | V    |
| V <sub>EN</sub>                                    | 0 to V <sub>IN</sub> | V    |
| Junction Temperature Range, T <sub>J</sub>         | -40 to +125          | °C   |
| Package Thermal Resistance (TSOT23), $\theta_{JA}$ | 235                  | °C/W |

Typical application circuit with external components are shown on page 1.

#### Notes:

- (1) Exceeding maximum rating may damage the device.
- (2) The maximum allowable power dissipation at any  $T_A$  (ambient temperature) is  $P_{Dmax} = (T_{Jmax} T_A) / \theta_{JA}$ . Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.
- (3) The device is not guaranteed to work outside its operating rating.

# **ELECTRICAL OPERATING CHARACTERISTICS (1)**

 $V_{IN} = V_{OUT} + 1.0V$ ,  $V_{EN} = High$ ,  $I_{OUT} = 100 \mu A$ ,  $C_{IN} = C_{OUT} = 1 \mu F$ , ambient temperature of 25°C (over recommended operating conditions unless specified otherwise). **Bold numbers** apply for the entire junction temperature range.

| CAT6221-SPTD-G | 3.3V / 3.0V  | TSOT-23 | 3000              |

#### Notes:

- (1) All packages are RoHS-compliant (Lead-free, Halogen-free).
- (2) The standard lead finish is NiPdAu pre-plated (PPF) lead frames.
- (3) The device used in the above example is a CAT6221-MGTD-GT3 (V<sub>OUT1</sub> = 2.8V, V<sub>OUT2</sub> = 1.8V, in a TSOT-23 package, NiPdAu, Tape and Reel).
- (4) For other voltage combinations, please contact your nearest ON Semiconductor Sales office.
- (5) Top marking for CAT6221 is T3YM (Y = Year, M = Month).

#### **REVISION HISTORY**

| Date      | Rev. | Description                                    |
|-----------|------|--|
| 10-Oct-07 | Α    | Initial Release                                |
| 19-Nov-08 | В    | Change logo and fine print to ON Semiconductor |
