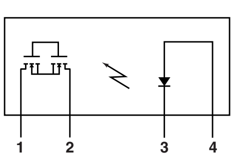
Pin Configuration



Description

Clare and IXYS have combined to bring OptoMOS® technology, reliability and compact size to a new family of high power Solid State Relays.

As part of this family, the CPC1918 single pole normally open (1-Form-A) Solid State Power Relay is rated for up to $13A_{rms}$ continuous load current with a 5°C/W heat sink.

The CPC1918 employs optically coupled MOSFET technology to provide $2500V_{rms}$ of input to output isolation. The output is constructed with efficient MOSFET switches and photovoltaic die that use Clare's patented OptoMOS architecture while the input, a highly efficient GaAlAs infrared LED provides the optically coupled control. The combination of low on-resistance and high load current handling capability makes this relay suitable for a variety of high performance switching applications.

The unique ISOPLUS-264 package pioneered by IXYS allows solid state relays to achieve the highest load current and power ratings. This package features a unique IXYS process where the silicon chips are soft soldered onto the Direct Copper Bond (DCB) substrate instead of the traditional copper leadframe. The DCB ceramic, the same substrate used in high power modules, not only provides $2500V_{rms}$ isolation but also very low thermal resistance (0.3 °C/W).

Thermal Characteristics

Parameter	Conditions	Symbol	Min	Typ	Max	Units
Thermal Resistance (junction to case)	-	$R_{\theta JC}$	-	-	0.3	°C/W
Thermal Resistance (junction to ambient)	Free air	$R_{\theta JA}$	-	33	-	°C/W

Thermal Management

Device high current characterization was performed using Kunze heat sink KU 1-159, phase change thermal interface material KU-ALC 5, and transistor clip KU 4-499/1. This combination provided an approximate junction-to-ambient thermal resistance of 12.5°C/W.

Heat Sink Calculation

Higher load currents are possible by using lower thermal resistance heat sink combinations.

Heat Sink Rating

$$R_{\theta CA} = \frac{(T_J - T_A)\, I_{L(99)}^{\;2}}{I_L^{\;2} \bullet P_{D(99)}} - R_{\theta JC}$$

T_J = Junction Temperature (°C), $T_J \leq 100°C$ *
T_A = Ambient Temperature (°C)
$I_{L(99)}$ = Load Current with Case Temperature @ 99°C (A_{DC})
I_L = Desired Operating Load Current (A_{DC}), $I_L \leq I_{L(MAX)}$
$R_{\theta JC}$ = Thermal Resistance, Junction to Case (°C/W) = 0.3°C/W
$R_{\theta CA}$ = Thermal Resistance of Heat Sink & Thermal Interface Material , Case to Ambient (°C/W)
$P_{D(99)}$ = Maximum power dissipation with case temperature held at 99ºC = 3.33W

* Elevated junction temperature reduces semiconductor lifetime.
