EPSILON5 - Atmel AT91SAM7 JTAG ISP Upgrade Pack

This upgrade pack allows an Epsilon5 programmer to support In-System Programming (ISP) of the Atmel AT91SAM7 ARM microcontroller family. The pack includes the 'AT91SAM7 License Upgrade' and also a SAM7 ISP Connector Cable which connects between the programmer and a suitable SAM7 Target Board.

The Device Library supports In-System Programming (ISP) of the Atmel AT91SAM7 "S", "SE", "A" and "L" families of ARM7 microcontrollers. This solution is aimed at high throughput production users who require the fastest possible programming of the on-chip FLASH memory of any AT91SAM7 microcontroller. The standard ARM JTAG Debug Port is used as the programming interface so no extra pins are needed to facilitate the ISP functionality.
