### **Pin Descriptions**

Pin #	Pin Name	Description			
1	VOUT	Connect to output capacitor.			
2	SW2	Switching Node connection to the internal PFET switch (P2) and NFET synchronous rectifier (N2).			
3	PGND	Power Ground.			
4	SW1	Switching Node connection to the internal PFET switch (P1) and NFET synchronous rectifier (N1).			
5	$PV_{IN}$	Supply to the power switch, connect to the input capacitor.			
6	EN	Enable Input. Set this digital input high for normal operation. For shutdown, set low.			
7	VDD	Signal Supply input. If board layout is not optimum an optional 1µF ceramic capacitor is suggested as close to this pin as possible.			
8	NC*	No connect. Connect this pin to GND on PCB layout.			
9	SGND	Analog and Control Ground.			
10	MODE/SYNC	Mode = LOW, Automatic Mode. Mode= HI, Forced PWM Mode SYNC = external clock synchronization from 1.6MHz to 2.7MHz (When SYNC function is used, device is forced in PWM mode).			
11	VSEL	Voltage selection pin; (ie: 2.8V/3.3V option) Logic input low = 2.8V and logic high = 3.3V to set output Voltage.			
12	FB	Feedback Analog Input. Connect to the output at the output filter.			
DAP	DAP	Die Attach Pad, connect the DAP to SGND on PCB layout to enhance thermal performance. It should not be used as a primary ground connection.			

## **Ordering Information**

Order Number	Package	NSC Package Marking	Supplied As

### **Operating Information**

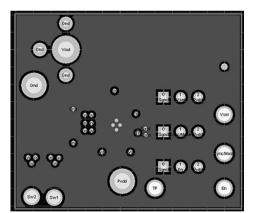

The LM3668 evaluation board is set for the following default positions:

- V<sub>OUT</sub> = 3.3V, for V<sub>OUT</sub> = 2.8V move VSEL pin to Low via jumper
- SYNC Mode = H (PWM Mode), for Auto Mode, set SYNC = Low (move jumper to inner position). Do not leave this pin floating.
- EN pin is tied to V<sub>IN</sub> via a jumper
- It is not recommended to start up the device with full load at minimum input voltage

# **Evaluation Board Layout**

LM3668EVB is a four-layer board designed to maximize the performance. Top layer consists of high current path; bottom layer is for low current and logic signals path. Inner layer 1 and layer 2 are dedicated for PGND (power GND) and SGND (analog and logic GND). For optimum performance, it is recommended to separate the PGND & SGND pins and join them together at the "star GND" on the PCB. The star GND traces on the PCB board should be close to the device power GND pin.
