

PolySwitch Resettable Devices Line-Voltage-Rated Devices

PolySwitch LVR devices help protect electric motors and transformers used in commercial and home appliances from damage caused by mechanical overloads, overheating, stall, lost neutral and other potentially harmful conditions.

The LVR line voltage product line of polymeric positive temperature coefficient (PPTC) devices includes components that are rated for line voltages of 120V_{AC} and 240V_{AC}, for up to 2A of operating current at 20°C. They help protect against damage caused by both overcurrent surges and overtemperature faults, offer low resistance, and are compatibly sized with fuse solutions.

Unlike traditional fuses, PolySwitch devices do not require replacement after a fault event. After power has been removed and the overcurrent condition eliminated, the circuit is restored to normal operating condition. Compared to bimetal breakers, they offer greater flexibility, longer lifespan, and lower electromagnetic interference (EMI).

The PolySwitch LVR devices' resettable functionality and latching attributes make them a reliable, cost-effective circuit protection solution for both intermittent- and continuous-operation motor applications. Their low resistance, fast time-to-trip, and low profile help circuit designers provide a safe and dependable product, comply with regulatory agency requirements, and reduce warranty repair costs.

LVR/LVRL series are for line voltage applications up to a continuous operating voltage of 240V_{AC}/120V_{AC}.

RoHS versions of all products are available.

Benefits

- Many product choices give engineers more design flexibility
- Compatible with high-volume electronics assembly
- Assist in meeting regulatory requirements
- Higher voltage ratings allow use in new applications

Features

- Broadest range of radial-leaded resettable devices available in the industry
- Current ratings from 50mA to 2A
- Line voltage rating of 120V_{AC} and 240V_{AC}
- Agency recognition : UL, CSA, TÜV
- Fast time-to-trip
- Low resistance

Applications

- Electromagnetic loads
- Game machines
- Industrial controls
- Lighting ballast
- Loudspeakers
- Medical equipment
- Motors, fans and blowers
- POS equipment
- Satellite video receivers
- Security and fire alarm systems
- Test and measurement equipment
- Transformers
- USB hubs, ports and peripherals

Table L1 Product Series - Current Rating, Voltage Rating / Typical Resistance for LVR Devices

Voltage Rating	LVR 240V _{AC} / 120V _{AC}	LVRL 120V _{AC}

Notes:

- I_H : Hold current: maximum current device will pass without interruption in 20°C still air.
 I_T : Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air.
 V_{MAX} Operating : Maximum continuous voltage device can withstand without damage at rated current.
 V_{MAX} Interrupt : Under specified conditions this is the highest voltage that can be applied to the device at the maximum interrupt current.
 I_{MAX} Interrupt : Maximum fault current device can withstand without damage at rated voltage.
 P_D : Power dissipated from device when in the tripped state in 20°C still air.
 R_{MIN} : Minimum resistance of device as supplied at 20°C unless otherwise specified.
 R_{MAX} : Maximum resistance of device as supplied at 20°C unless otherwise specified.
 R_{1MAX} : Maximum resistance of device when measured one hour post trip at 20°C unless otherwise specified.

* Electrical characteristics determined at 20°C.

† See Application Limitations on next page.

Warning : Application Limitations for the LVR Product Line

- 1) Users should independently evaluate the suitability of and test each product selected for their own application.
- 2) This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded in a fault condition. Operation beyond the maximum ratings or improper use may result in device damage and possible electrical arcing and flame.
- 3) A PPTC device is not a fuse - it is a nonlinear thermistor that limits current. Under a fault condition all PPTC devices go into a high resistance state but do not open circuit, so hazardous voltage may be present at PPTC locations.
- 4) The devices are intended for protection against damage caused by occasional overcurrent or overtemperature fault conditions and should not be used when repeated fault conditions or prolonged trip events are anticipated.
- 5) In most applications power must be removed and the fault condition cleared in order to reset a PPTC device; however under certain unusual conditions, a PPTC device may automatically reset. PPTC devices should not be used in an application where an automatic reset could create a safety hazard, such as garbage disposals and blenders. Appropriate qualification testing should be performed.
- 6) It is the responsibility of the user to determine the need for back up or failsafe protection to prevent damage that may occur in the event of abnormal function or failure of the PPTC device.
- 7) Operation in circuits with a large inductance can generate a circuit voltage ($L di/dt$) above the rated voltage of a PPTC device. This product should not be used in an application where the maximum interrupt voltage or maximum interrupt current can be exceeded by inductive spikes.
- 8) Devices are not recommended for reflow soldering.
- 9) Device performance can be impacted negatively if devices are handled in a manner inconsistent with recommended electronic, thermal, or mechanical procedures for electronic components.
- 10) PPTC devices are not recommended for installation in applications where the device is constrained such that its PTC properties are inhibited, for example in rigid potting materials or in rigid housings, which lack adequate clearance to accommodate device expansion.
- 11) Contamination of the PPTC material with certain silicone-based oils or some aggressive solvents can adversely impact the performance of the devices.

LVR/LVRL

Physical Characteristics

Lead material	LVR005N-016 : Tin-plated copper, (24AWG), ø0.51mm (0.020in.)
	LVR025-040 : Tin-plated copper, (22AWG), ø0.64mm (0.025in.)
	LVR055-200 : Tin-plated copper, (20AWG), ø0.81mm (0.032in.)
	LVRL : Tin-plated copper, (20AWG), ø0.81mm (0.032in.)
Soldering characteristics	Solderability per ANSI/J-STD-002 Category 3
Solder heat withstand	Per IEC-STD 68-2-20, Test Tb, Method 1A, Condition B, can withstand 10 seconds at 260°C ±5°C
Insulating material	LVR005N-055 : Cured, flame-retardant epoxy polymer, meets UL 94V-0
	LVR075-200 : Cured, flame-retardant modified silicone, meets UL 94V-0
	LVRL : Cured, flame-retardant epoxy polymer, meets UL 94V-0

Note: Devices are not designed to be placed through a reflow process.

Environmental Specifications

Test	Conditions	Resistance Change
Passive aging	70°C, 1000 hours	±10%
	85°C, 1000 hours	±10%
Humidity aging	85°C, 85%RH, 1000 hours	±20%
Thermal shock	85°C, -40°C (10 times)	±15%
Solvent resistance	MIL-STD-202, Method 215F	No change

Agency Recognitions for LVR Devices

UL	File # E74889
CSA	File # CA78165
TÜV	Certificate number available on request (per IEC 60730-1).

Table L7 Tape and Reel Specifications for LVR Devices

LVR devices are available in tape and reel packaging per EIA468-B/IEC60286-2 standards.
See Figures L7 and L8 for details.

Description	EIA Mark	Dimension (mm)	Tolerance
Carrier tape width	W	18	-0.5/+1.0
Hold-down tape width	W ₄	11	Minimum
Top distance between tape edges	W ₆	3	Maximum
Sprocket hole position	W ₅	9	-0.5/+0.75
Sprocket hole diameter	D ₀	4	± 0.2
Abscissa to plane (straight lead) LVR005N to LVR016	H	18.5	± 2.5
Abscissa to plane (kinked lead) LVR005N to LVR016	H ₀	16.0	± 0.5
Abscissa to top LVR005N to LVR016	H ₁	32.2	Maximum
Abscissa to top* LVR025 to LVR055	H ₁	45.0	Maximum
Overall width with lead protrusion LVR005N to LVR016	C ₁	43.2	Maximum
Overall width with lead protrusion LVR025 to LVR055	C ₁	56.0	Maximum
Overall width without lead protrusion LVR005N to LVR016	C ₂	42.5	Maximum
Overall width without lead protrusion LVR025 to LVR055	C ₂	56.0	Maximum
Lead protrusion	L ₁	1.0	Maximum
Protrusion of cut-out	L	11.0	Maximum
Protrusion beyond hold-down tape	I ₂	Not specified	—
Sprocket hole pitch	P ₀	12.7	± 0.3
Device pitch LVR005N to LVR040	—	12.7	± 0.3
Device pitch LVR055	—	25.4	± 0.6
Pitch tolerance	—	20 consecutive	± 1
Tape thickness	t	0.9	Maximum
Overall tape and lead thickness LVR005N to LVR040	t ₁	1.5	Maximum
Overall tape and lead thickness LVR055	t ₁	2.3	Maximum
Splice sprocket hole alignment	—	0	± 0.3
Body lateral deviation	Δh	0	± 1.0
Body tape plane deviation	Δp	0	± 1.3
Ordinate to adjacent component lead	P ₁	3.81	± 0.7
Lead spacing*	F	5.08	+0.75/-0.5
Reel width LVR005N to LVR040	w ₂	56.0	Maximum
Reel width* LVR055	w ₂	63.5	Maximum
Reel diameter	a	370.0	Maximum
Space between flanges* LVR005N to LVR040	w ₁	48.0	Maximum
Space between flanges* LVR055	w ₁	55.0	Maximum
Arbor hold diameter	c	26.0	± 12.0
Core diameter*	n	91.0	Maximum
Box	—	64/372/362	Maximum
Consecutive missing places	—	None	—
Empty places per reel	—	0.1%	Maximum

*Differs from EIA specification.

Figure 1 consists of four schematic diagrams labeled (a) through (d).
 (a) A side view of the device showing two vertical rectangular sections. The width of the left section is labeled w_1 and the width of the right section is labeled w_2 .
 (b) A cross-section of the device, which is circular. The outer radius is labeled a . The inner radius is labeled n . The distance from the center to the bottom edge of the inner circle is labeled c . The text "Cross section" is written below the diagram. Below the diagram, it says "Optional shape: Circular or polygonal".
 (c) A top view of the device. It shows a central circular area labeled "Reel" and a surrounding rectangular area labeled "Type". An arrow labeled "Direction of unreeing" points downwards. The text "Upper side" and "Lower side" are written on the right side of the diagram.
 (d) A detail view of the "Reel" and "Type" components. It shows a trapezoidal shape and a circular shape with a cross-section.

LVR 075 S 2

Packaging

Blank = Packaged in bags

-1 = 25.4mm (1.0 inch) minimum lead length

-2 = Tape and reel

-X.X = Special lead cut length (inch)

K = Standard kinked lead
S = Straight lead

Product Series
LVR = 240V ra
LVRL = 120V ra
