

To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.)

Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

Renesas Technology Corp.
Customer Support Dept.
April 1, 2003

DESCRIPTION

The M35076-XXXSP is a character pattern display control IC can display on the digital camera, the digital video, the digital television, the CRT display, the liquid crystal display and the plasma display. It can display 2 pages (24 characters × 12 lines per 1 page) at the same time. It uses a silicon gate CMOS process and it housed in a 20-pin shrink DIP package (M35076-XXXSP).

For M35076-001SP that is a standard ROM version of M35076-XXXSP respectively, the character pattern is also mentioned.

FEATURES

- Screen composition 24 characters × 12 lines × 2 pages
- Number of characters displayed 288 (Max.) × 2 pages
- Character composition 12 X 18 dot matrix
- Characters available 0 page:256 characters
1 page:256 characters
- Character sizes available 4 (vertical) X 2 (horizontal)
- Display locations available
 - Horizontal direction 2007 locations
 - Vertical direction 1023 locations
- Blinking Character units
 - Cycle : division of vertical synchronization signal into 32 or 64
 - Duty : 25%, 50%, or 75%
- Data input By the 16-bit serial input function
..... By the I²C-BUS serial input function(at V_{DD}=5V only)
- Coloring for ROM character
 - Character color 8 colors (Character unit)
 - Background coloring 8 colors (Character unit)
 - Border (shadow) coloring 8 colors (RGB output)
Specified by register
 - Raster coloring 8 colors (RGB output)
Specified by register
- Blanking
 - Character size blanking
 - Border size blanking
 - Matrix-outline blanking
 - All blanking (all raster area)
- Output ports
 - 8 shared output ports (toggled between RGB output)
- Display RAM erase function
- Display oscillation stop function
<V_{DD}=5V>
- Display input frequency range
 - External clock mode 1 Fosc = 6.3 MHz to 80.0 MHz
 - External clock mode 2 Fosc = 20.0 MHz to 110.0 MHz
 - Internal clock mode Fosc = 20.0 MHz to 110.0 MHz
- Horizontal synchronous input frequency
 - H.sync = 15 kHz to 130 kHz
- <V_{DD}=3V>
- Display input frequency range
 - External clock mode 1 Fosc = 6.3 MHz to 40 MHz
- Horizontal synchronous input frequency
 - H.sync = 15 kHz to 60 kHz

APPLICATION

Digital camera, Digital video, Digital television, CRT display, Liquid crystal display, Plasma display

PIN CONFIGURATION (TOP VIEW)

Outline 20P4B

PIN DESCRIPTION

Pin Number	Symbol	Pin name	Input/Output	Function
1	CPOUT	Filter output	Output	Filter output. Connect loop filter to this pin.
2	VSS2	Earthing pin	—	Connect to GND.
3	$\overline{AC}$	Auto-clear input	Input	When "L", this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
4	$\overline{CS}$	Chip select input	Input	<at the 16-bit serial communication> Chip select pin. Set this pin to "L" level at serial data transfer. Hysteresis input. Built-in pull-up resistor.
				<at the I ² C-BUS serial communication> Set this pin to "H" level.
5	SCK/SCL	Clock input	Input	<at the 16-bit serial communication> SIN pin serial data is taken in when SCK rises at $\overline{CS}$ pin "L" level. Hysteresis input.
				<at the I ² C-BUS serial communication> SDA pin serial data is taken in synchronized with SCL.
6	SIN/SDA	Data input	Input	<at the 16-bit serial communication> This is the pin for serial input of display control register and display RAM data. Hysteresis input.
		Data I/O	I/O	<at the I ² C-BUS serial communication> Hysteresis input. This is the pin for serial input of display control register and display RAM data. Also this pin output acknowledge signal.
7	TCK	External clock	Input	This is the pin for external clock input.
8	VDD1	Power pin	—	Please connect to +5V with the power pin.
9	P6/B1	Port P6 output	Output	This pin can be toggled between port pin output and B1 signal output.
10	P7/BLNK1	Port P7 output	Output	This pin can be toggled between port pin output and BLNK1 signal output.
11	VSS1	Earthing pin	—	Please connect to GND using circuit earthing pin.
12	P0/BLNK0	Port P0 output	Output	This pin can be toggled between port pin output and BLNK0 signal output.
13	P1/R0	Port P1 output	Output	This pin can be toggled between port pin output and R0 signal output.
14	P2/R1	Port P2 output	Output	This pin can be toggled between port pin output and R1 signal output.
15	P3/G0	Port P3 output	Output	This pin can be toggled between port pin output and G0 signal output.
16	P4/G1	Port P4 output	Output	This pin can be toggled between port pin output and G1 signal output.
17	P5/B0	Port P5 output	Output	This pin can be toggled between port pin output and B0 signal output.
18	HOR	Horizontal synchronous signal input	Input	This pin inputs the horizontal synchronous signal. Hysteresis input.
19	VERT	Vertical synchronous signal input	Input	This pin inputs the vertical synchronous signal. Hysteresis input.
20	VDD2	Power pin	—	Please connect to +5V with the power pin.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

MEMORY CONSTITUTION

Address 000₁₆ to 11F₁₆ are assigned to the display RAM, address 120₁₆ to 128₁₆ are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120₁₆ to 128₁₆) are set to "0" when the $\overline{AC}$ pin level is "L". And then, RAM is not erased and be undefined. This memory is consisted of 2

pages : page 0 memory and page 1 memory (their addresses are common), page controlled by DAF bit of each address when writing data. For detail, see "Data input". Memory constitution is shown in Figure 1 and 2.

Addresses	DAF	DAE	DAD	DAC	DAB	DAA	DA9	DA8	DA7	DA6	DA5	DA4	DA3	DA2	DA1	DA0

Fig. 2 Memory constitution (page 1 memory)

Note: Page 0 and page 1 registers are found in their respective pages. For example, HP10 to HP0 of the page 0 memory sets the horizontal display start position of page 0, whereas HP10 to HP0 (same register name) of the page 1 memory sets the horizontal display start position of page 1. Also, registers common to both page 0 and page 1 are found only in the page 0 memory. For example, PTC0 is the control register of the P0 pin and is found only in the page 0 memory.

SCREEN CONSTITUTION

The screen lines and rows are determined from each address of the display RAM (page 0 and page 1 are common). The screen constitution is shown in Figure 3.

Row Line	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24

Notes 1. The display RAM is undefined state at the AC pin.

2. The display RAM consists of 2 pages, page 0 and page 1 (common address). The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

REGISTERS DESCRIPTION

(1) Address 120₁₆

DA	Register	Contents		Remarks															
		Status	Function																
0	DIV0 (Note 3)	0 1	Set division value (multiply value) of horizontal oscillation frequency. $N1 = \sum_{n=0}^{10} (DIVn \times 2^n)$ N1 : division value (multiply value)	Set display frequency by division value (multiply value) setting. For details, see REGISTER SUPPLEMENTARY DESCRIPTION (1). Also, set the display frequency range by registers DIVS0, DIVS1(address 120 ₁₆), RSEL0(address 121 ₁₆) and RSEL1(address 122 ₁₆) in accordance with the display frequency. Any of this settings above is required only when EXCK1 = 0, EXCK0 = 1 and EXCK1 = 1, EXCK0 = 1.															
1	DIV1 (Note 3)	0 1																	
2	DIV2 (Note 3)	0 1																	
3	DIV3 (Note 3)	0 1																	
4	DIV4 (Note 3)	0 1																	
5	DIV5 (Note 3)	0 1																	
6	DIV6 (Note 3)	0 1																	
7	DIV7 (Note 3)	0 1																	
8	DIV8 (Note 3)	0 1																	
9	DIV9 (Note 3)	0 1																	
A	DIV10 (Note 3)	0 1																	
B	DIVS0 (Note 3)	0 1	For setting, see REGISTER SUPPLEMENTARY DESCRIPTION (2).	Set display frequency range.															
C	DIVS1 (Note 3)	0 1																	
D	DISV2 (Note 3)	0 1																	
E	EXCK0 (Note 3)	0 1	<table><tr><td>EXCK1</td><td>EXCK0</td><td>Display clock input</td></tr><tr><td>0</td><td>0</td><td>External clock mode 1</td></tr><tr><td>0</td><td>1</td><td>Internal clock mode</td></tr><tr><td>1</td><td>0</td><td>Do not set</td></tr><tr><td>1</td><td>1</td><td>External clock mode 2</td></tr></table>	EXCK1	EXCK0	Display clock input	0	0	External clock mode 1	0	1	Internal clock mode	1	0	Do not set	1	1	External clock mode 2	Display clock setting See REGISTER SUPPLEMENTARY DESCRIPTION (1) EXCK1 : address123 ₁₆
EXCK1	EXCK0	Display clock input																	
0	0	External clock mode 1																	
0	1	Internal clock mode																	
1	0	Do not set																	
1	1	External clock mode 2																	

Notes 1. The mark 0 around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

D	BLINK2	①	Divided into 64 of vertical synchronous signal	Set blinking frequency.															
		1	Divided into 32 of vertical synchronous signal																
E	MODE1 (Note 3)	①	For setting, see MODE0 (address 127 ₁₆).	Sets the RGB signal output system and the display mode for when 2 pages are displayed at the same time.															
		1																	

Notes 1. The mark ① around the status value means the reset status by the "L" level is input to $\overline{AC}$ pin.

2. The page in which data is written is controlled by the DAF bit. When set to "0", data is written into page 0, whereas when set to "1", data is written into page 1.

3. Registers marked with (Note 3) are found only in page 0, therefore the register value does not change when the DAF bit is set to "1".

REGISTER SUPPLEMENTARY DESCRIPTION

(1) Setting external clock input and display frequency mode
 Setting external clock input and display frequency mode (by use of EXCK0 (120₁₆), EXCK1 (123₁₆) and DIV10 to DIV0 (120₁₆), as explained here following.

(a) When (EXCK1, EXCK0) = (0, 0)External clock mode 1
 $F_{osc} = 6.3 \text{ to } 80 \text{ MHz}$ ($V_{DD} = 4.75 \text{ to } 5.25 \text{ V}$)
 $F_{osc} = 6.3 \text{ to } 40 \text{ MHz}$ ($V_{DD} = 2.50 \text{ to } 3.50 \text{ V}$)
 Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant period continuous horizontal synchronous signal.
 Never stop inputting the clock while displaying.
 Do not have to set a display frequency because the clock just as it is entered from outside is used as the display clock.

(b) When (EXCK1, EXCK0) = (0, 1)Internal clock mode
 $F_{osc} = 20 \text{ to } 110 \text{ MHz}$ ($V_{DD} = 4.75 \text{ to } 5.25 \text{ V}$)
 Clock input from the TCK pin is unnecessary. The multiply clock of the internally generated horizontal synchronous signal is used as the display clock.
 The display frequency is set by setting the multiply value of the horizontal synchronous frequency (of the display frequency) in DIV10 to DIV0 (address 120₁₆). Also, set the display frequency range. (See the next page.)
 Display frequency is calculated using the below expression.

$$\text{Display frequency} = \text{Horizontal synchronous frequency} \times \text{Multiply value}$$

(c) When (EXCK1, EXCK0) = (1, 0) Setting disabled

(d) When (EXCK1, EXCK0) = (1, 1)External clock mode 2
 $F_{osc} = 20 \text{ to } 110 \text{ MHz}$ ($V_{DD} = 4.75 \text{ to } 5.25 \text{ V}$)
 Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant-period continuous horizontal synchronous signal.
 Never stop inputting the clock while displaying.
 An internal clock which is in sync with the external input clock is used as the display clock.
 Because the display frequency equals the external clock frequency, set N1 (division value) that satisfies the below expressions to DIV10 to DIV0 (address 120₁₆) for make the display frequency is equal to the external clock frequency.

$$N1 = \text{external clock frequency} / \text{horizontal synchronous frequency}$$

$$N1 = \sum_{n=0}^{10} 2^n \text{DIV}_n$$

Also, set the display frequency range. (See the next page.)

Fig. 4 Example of external clock input

(2) To set display frequency range

Whenever setting display frequency (when EXCK1 = "0", EXCK0 = "1", or EXCK1 = "1", EXCK0 = "1"), always set the display frequency range in accordance with the display frequency. This range is set from DIVS0, DIVS1, DIVS2 (address 120₁₆), RSEL0 (address 121₁₆) and RSEL1 (address 122₁₆). Frequency ranges are given here below.

RSEL1	RSEL0	DIVS2	DIVS1	DIVS0	Display frequency range(MHz)
1	1	0	0	0	100.0 to 110.0
1	0	0	0	0	—
0	1	0	0	0	92.0 to 100.0
0	0	0	0	0	73.0 to 92.0
1	1	0	0	1	66.5 to 73.0
1	0	0	0	1	—
0	1	0	0	1	61.0 to 66.5
0	0	0	0	1	49.0 to 61.0
1	1	0	1	0	—
1	0	0	1	0	—
0	1	0	1	0	45.5 to 49.0
0	0	0	1	0	36.5 to 45.5
1	1	0	1	1	33.5 to 36.5
1	0	0	1	1	—
0	1	0	1	1	30.5 to 33.5
0	0	0	1	1	24.5 to 30.5
1	1	1	0	0	—
1	0	1	0	0	—
0	1	1	0	0	23.0 to 24.5
0	0	1	0	0	20.0 to 23.0

(3) Notes on setting display frequency

To change external clock (display) frequency or horizontal synchronization frequency, always use the following procedures.

To set EXCK1 = "0", EXCK0 = "1"

- Turn the display OFF. ... DSPON (address 128₁₆) = "0"
- Set the display frequency. ... Set from DIV10 to DIV0, DIVS0, DIVS1, DIVS2 (address 120₁₆), RSEL0 (address 121₁₆) and RSEL1 (address 122₁₆).
- Wait 20 ms while the horizontal synchronization signal is being input.
- Turn the display ON. ... DSPON (address 128₁₆) = "1"

To set EXCK1 = "1", EXCK0 = "1"

- Turn the display OFF. ... DSPON (address 128₁₆) = "0"
- Set the display frequency. ... Set from DIV10 to DIV0, DIVS0, DIVS1, DIVS2 (address 120₁₆), RSEL0 (address 121₁₆) and RSEL1 (address 122₁₆).
- Wait 20 ms while the horizontal synchronization signal and external clock are being input.
- Turn the display ON. ... DSPON (address 128₁₆) = "1"

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DISPLAY FORM 1

M35076-XXXSP has the following four display forms.

(1) Blanking mode

Character size

: Blanking same as the character size.

Border size

: Blanking the background as a size from character.

Matrix-outline size

: Blanking the background 12 × 18 dot.

All blanking size

: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0 (address 128₁₆), DSP0 to DSP11 (address 124₁₆).

BCOL	BLK1	BLK0	Line of DSPn = "0"		Line of DSPn = "1"	
			Display mode	Blanking mode	Display mode	Blanking mode
0	0	0	All matrix-outline border display	All matrix-outline size	All matrix-outline display	All matrix-outline size
	0	1	Character display	Character size	Border display	Border size
	1	0	Border display	Border size	All matrix-outline display	All matrix-outlinesize
	1	1	All matrix-outline display	All matrix-outline size	Character display	Character size
1	0	0	All matrix-outline border display	All blanking size	All matrix-outline display	All blanking size
	0	1	Character display		Border display	
	1	0	Border display		All matrix-outline display	
	1	1	All matrix-outline display		Character display	

Fig. 5 Example of R0,G0,B0,BLNK0,R1,G1,B1 and BLNK1 signal output

(2) Shadow display

When border display mode, if set SYAD (address 128₁₆) = "0" to "1", it change to shadow display mode.

Border and shadow display are shown below.

Set shadow display color by BR, BG or BB of display RAM or by register FR, FG and FB (address 127₁₆).

Fig. 6 Border and shadow display

DISPLAY FORM 2

This IC can display both page 0 and page 1 at the same time.

Page 0: Set the DAF bit in each addresses to "0".

Page 1: Set the DAF bit in each addresses to "1".

Fig. 7 Example of 2 pages display

Example 1: Display position, display size, color, etc., can be freely set for each page, and the 2 pages can be displayed on top of each other or side-by-side.

Example 2: RGB output of two pages can be outputted by one line or two lines by registers MODE0 (address 127₁₆) and MODE1 (address 128₁₆) and POPUP (address 126₁₆). And, when the display range of the 2 pages overlap on the monitor screen at the time of an one-line output, they can perform the following displays. (The POPUP register is effective only when MODE0 = "0" and MODE1 = "0".)

MODE1	MODE0	POPUP	Output system	Display mode
0	0	0	1 system	Standard (Page 1 priority)
		1	1 system	Standard (Page 0 priority)
0	1	—	1 system	AND
1	0	—	2 systems	—
1	1	—	1 system	OR

(1) Output system

- (a) 1 system : Output RGB signal of both of page 0 and 1 from R0,G0,B0 and BLNK0 pin (For overlapping areas, refer to below.)
- (b) 2 systems : RGB signal of page 0 is output from R0,G0,B0 and BLNK0 pin, RGB signal of page 1 is output from R1,G1,B1 and BLNK1 pin.

(2) Display mode (Overlapping areas of Page 0 and 1)

- (a) Standard (page 1 priority).. Page 1 has priority in overlapping areas. Page 0 is not displayed in those areas.
- (b) Standard (page 0 priority).. Page 0 has priority in overlapping areas. Page 1 is not displayed in those areas.
- (c) AND In overlapping areas, the RGB output of the 2 pages is AND processed and output.
- (d) OR In overlapping areas, the RGB output of the 2 pages is OR processed and output.

Note : Set 0 (port output) to control register PTC2, PTC4 and PT67 except at 2 systems output setting (MODE1=1,MODE0=0.)

CHARACTER FONT

Images are composed on a 12 X 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Character code FF₁₆ is fixed as a blank without background. Therefore, cannot register a character font in this code.

Fig. 8 Example of border display

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by the 16-bit serial input function or the I²C-BUS serial input function. Example of data setting is shown in Figure 9 (at EXCK0 = "1", EXCK1 = "0" setting).

Data input example (M35076-XXXSP)

- Notes 1 : The page in which data is written is controlled by the address. To write data into page 0, set "0". To write data into page 1, set "1".
 2 : Input a continuous clock of constant period from the TCK pin. Also, input a horizontal synchronous signal into the HOR pin and a vertical synchronous signal into the VERT pin.
 3 : Matrix-outline display in this data.
 4 : Secure the waiting time of 200ms after releasing AC, and set data from setting the display frequency (setting of the register).
 5 : Set data to display RAM at internal clock (display clock) is stabilized.

Fig 9. Example of data setting

Fig 10. Example of the M35076-XXXSP peripheral circuit (External clock mode 1. At EXCK1 = "0", EXCK0 = "0")

Fig 12. Example of the M35076-XXXSP circuit (External clock mode 2. At EXCK1 = "1", EXCK0 = "1")

DATA INPUT 1

(1) The 16-bit communication function

- (a) Serial data should be input with the LSB first.
- (b) The address consists of 16 bits.
- (c) The data consists of 16 bits.

(d) The 16 bits in the SCK after the $\overline{CS}$ signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits. Therefore, it is not necessary to input the address from the second data.

Note. Stop the input to $\overline{SCK}$ pin and fix it to "H" at $\overline{CS}$ pin "H" level.

Fig.13 Serial input timing

(2)Timing requirements

Data input

Symbol	Parameter	Limits			Unit	Remarks
		Min.	Typ.	Max.		
$t_w(\text{SCK})$	SCK width	200	—	—	ns	See Figure 14
$t_{su}(\overline{\text{CS}})$	$\overline{\text{CS}}$ setup time	200	—	—	ns	
$t_h(\overline{\text{CS}})$	$\overline{\text{CS}}$ hold time	2	—	—	μs	
$t_{su}(\text{SIN})$	SIN setup time	200	—	—	ns	
$t_h(\text{SIN})$	SIN hold time	200	—	—	ns	
t_{word}	1 word writing time	10	—	—	μs	

Fig. 14 Serial input timing requirements

DATA INPUT 2

(1) The I²C-Bus communication function (at VDD=5V only)

This IC has a built-in data transmission interface which utilizes 2 unidirectional buses. In communications, this IC functions as a slave reception device. Set $\overline{CS}$ pin to "H" level at the I²C-Bus serial input communication.

The IC is synchronized with the serial clock (SCL) sent from the master device and receives the data (SDA). Communications are controlled from the start/stop states. Also, always input the control byte after attaining the start state.

The below chart shows the start/stop state and control byte configuration.

Fig. 15 Start state / Stop state

Fig. 16 Control byte configuration

(2) Data input (Sequence)

- (a) Addresses are consists of 16 bits.
- (b) Data is consists of 16 bits.
- (c) Addresses and data are communicated in 8-bit units. Input the lower 8 bits before the upper 8 bits. Make input from the MSB side.
- (d) After the start state has been attained and the control byte (7CH) received, the next 16 bits (2 bytes) are for inputting the address. Addresses are increased in increments for every 16 bits (2 bytes) of data input thereafter. As a result, it is not necessary to input the address from the second data.

Note: During external synchronous, stop the external clock input from the TCK pin while inputting data.

ACK* (Acknowledge) : Output the acknowledge signal whenever one byte input after the start state.
Output the acknowledge signal and recieve the data thereafter when mach the slave address (7CH).

		SCK/SCL, SIN/SDA		0	0	0.3VDD	V
FOSC	Oscillating frequency for display	External clock mode 1	VDD = 4.75 to 5.25 V	6.3	—	80.0	MHz
			VDD = 2.50 to 3.50 V	6.3	—	40.0	MHz
		External clock mode 2	VDD = 4.75 to 5.25 V	20.0	—	110.0	MHz
		Internal clock mode	VDD = 4.75 to 5.25 V	20.0	—	110.0	MHz
H.sync	Horizontal synchronous signal input frequency	VDD = 4.75 to 5.25 V		15.0	—	130.0	kHz
		VDD = 2.50 to 3.50 V		15.0	—	60.0	kHz

ELECTRICAL CHARACTERISTICS 1 $V_{DD}=5V$ ($V_{DD} = 5.00V$, $T_a = 25^{\circ}C$, unless otherwise noted)

Symbol	Parameter		Test conditions	Limits			Unit
				Min.	Typ.	Max.	
V_{DD}	Supply voltage		$T_a = -20$ to $+85^{\circ}C$	4.75	5.0	5.25	V
I_{DD}	Supply current		$V_{DD} = 5.00V$	—	40	60	mA
V_{OH}	"H" level output voltage	P0 to P7 (Note1)	$V_{DD} = 4.75V$, $I_{OH} = -0.4mA$	3.5	—	—	V
		CPOUT	$V_{DD} = 4.75V$, $I_{OH} = -0.05mA$				
V_{OL}	"L" level output voltage	P0 to P7 (Note2)	$V_{DD} = 4.75V$, $I_{OL} = 0.4mA$	—	—	0.4	V
		CPOUT	$V_{DD} = 4.75V$, $I_{OL} = 0.05mA$				
		SIN/SDA	$V_{DD} = 4.75V$, $I_{OL} = 3.0mA$				
R_i	Pull-up resistance $\overline{AC}$, $\overline{CS}$		$V_{DD} = 5.00V$	10	30	100	k Ω
V_{TCK}	External clock input width		$4.75V \leq V_{DD} \leq 5.25V$	$0.6V_{DD}$	—	$0.9V_{DD}$	V

Notes 1. The current from the IC must not exceed -0.4 mA/port at any of the port pins (P0 to P7).

2. The current flowing into the IC must not exceed 0.4 mA/port at any of port pins (P0 to P7).

ELECTRICAL CHARACTERISTICS 2 $V_{DD}=3V$ ($V_{DD} = 3.00V$, $T_a = 25^{\circ}C$, unless otherwise noted)

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
V_{DD}	Supply voltage	$T_a = -20$ to $+85^{\circ}C$	2.50	3.00	3.50	V
I_{DD}	Supply current	$V_{DD} = 3.00V$	—	20	30	mA
V_{OH}	"H" level output voltage P0 to P7 (Note1)	$V_{DD} = 2.70V$, $I_{OH} = -0.1mA$	2.30	—	—	V
V_{OL}	"L" level output voltage P0 to P7 (Note2)	$V_{DD} = 2.70V$, $I_{OH} = 0.1mA$	—	—	0.4	V
R_i	Pull-up resistance $\overline{AC}$, $\overline{CS}$	$V_{DD} = 3.00V$	30	—	150	$k\Omega$
V_{TCK}	External clock input width	$2.20V \leq V_{DD} \leq 3.50V$	$0.7V_{DD}$	—	V_{DD}	V

Notes 1. The current from the IC must not exceed -0.1 mA/port at any of the port pins (P0 to P7).

2. The current flowing into the IC must not exceed 0.1 mA/port at any of port pins (P0 to P7).

NOTE FOR SUPPLYING POWER

(1)Timing of power supplying to $\overline{AC}$ pin

The internal circuit of M35076-XXXSP is reset when the level of the auto clear input pin $\overline{AC}$ is "L". This pin is hysteresis input with the pull-up resistor.

The timing about power supplying of $\overline{AC}$ pin is shown in Figure 19.

After supplying the power (V_{DD} and V_{SS}) to M35076-XXXSP and the supply voltage becomes more than $0.8 \times V_{DD}$, it needs to keep V_{IL} time; t_w of the $\overline{AC}$ pin for more than 1ms.

Start inputting from microcomputer after $\overline{AC}$ pin supply voltage becomes more than $0.8 \times V_{DD}$ and keeping 200ms wait time.

(2)Timing of power supplying to V_{DD1} and V_{DD2} .

Supply power to V_{DD1} and V_{DD2} at the same time.

Fig. 19 Timing of power supplying to $\overline{AC}$ pin

PRECAUTION FOR USE

Notes on noise and latch-up

In order to avoid noise and latch-up, connect a bypass capacitor ($\approx 0.1\mu\text{F}$) directly between the V_{DD1} pin and V_{SS1} pin, and the V_{DD2} pin and V_{SS2} pin using a heavy wire.

Note for waveform timing of the horizontal signals to the HOR pin

Set horizontal synchronous signal edge* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/F register waveform timing under 5ns and input to HOR pin.

*: Set front porch edge or back porch edge by B/F register.

DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

- (1) M35076-XXXSP mask ROM order confirmation form
- (2) 20P4B mark specification form
- (3) ROM data : EPROMs or floppy disks

*In the case of EPROMs, three sets of EPROMs are required per pattern.

*In the case of floppy disks, 3.5-inch 2HD disk (1BM format) is required per pattern.

STANDARD ROM TYPE : M35076-001SP

M35076-001SP is a standard ROM type of M35076-XXXSP.
The character patterns for 0 page are fixed to the contents of Figure 20 to 23, the character patterns for page 1 are fixed to the contents of Figure 24 to 27.

PACKAGE OUTLINE

20P4B

Plastic 20pin 300mil SDIP

Renesas Technology Corp.

Nippon Bldg., 6-2, Otemachi 2-chome, Chiyoda-ku, Tokyo, 100-0004 Japan

Keep safety first in your circuit designs!

- Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
- The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
- Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
