General Description

The NC7SP17 is a single buffer with Schmitt trigger input from Fairchild's Ultra Low Power (ULP) Series of TinyLogic®. Ideal for applications where battery life is critical, this product is designed for ultra low power consumption within the V_{CC} operating range of 0.9V to 3.6V V_{CC} .

The internal circuit is composed of a minimum of inverter stages, including the output buffer, to enable ultra low static and dynamic power.

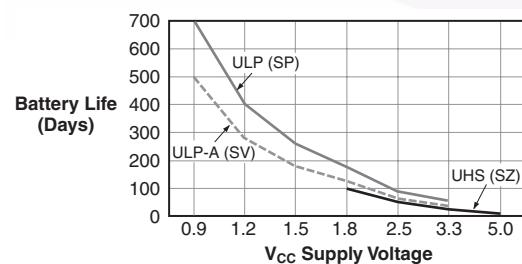

The NC7SP17, for lower drive requirements, is uniquely designed for optimized power and speed, and is fabricated with an advanced CMOS technology to achieve best in class speed operation while maintaining extremely low CMOS power dissipation.

Battery Life vs. V_{CC} Supply Voltage

TinyLogic ULP and ULP-A with up to 50% less power consumption can extend your battery life significantly.

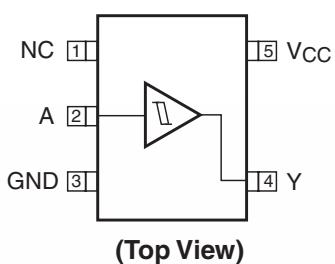

$$\text{Battery Life} = (V_{battery} \times I_{battery} \times 0.9) / (P_{device}) / 24\text{hrs/day}$$

$$\text{Where, } P_{device} = (I_{CC} \times V_{CC}) + (C_{PD} + C_L) \times V_{CC}^2 \times f$$

Assumes ideal 3.6V Lithium Ion battery with current rating of 900mAH and derated 90% and device frequency at 10MHz, with $C_L = 15\text{pF}$ load.
